5. First, disconnect the wire harness plug-in under the original vehicle seat cushion, use the product matching adapter wire, and reconnect according to the corresponding plug-in plug. Then, pulled remaining 2 extension wires to the rear wheel and connected with the wire harnesses on the tail lights on both sides. (After docking, you need to start the vehicle first, turn on the turn signal switch, and check whether the left and right steering functions of the tail lights are normal. If the steering function is reversed, replace the 2-side tail light wiring harness and re-connect it again). Finally, install the fenders and other Accessories. As shown:
